online II

Cash register

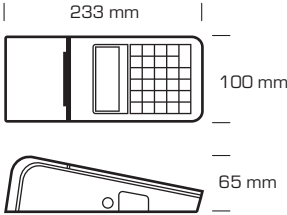

A WORTHY SUCCESSOR - the successor of the Novitus NANO cash register, which is the most sold on the Polish market. It is a perfect solution both in mobile sales and at a traditional sales stand. The model retains the best features of the original, i.e. small size and comfortable shape, as well as a waterproof backlit keyboard. However, new function keys have been added to allow faster sales and provide the cashier with a more intuitive operation. Buses, rentals companies, doctors' offices, parking lots, beauty salons, shops - the NANO II cash register will always adapt to your business. The Nano II Online GSM cash register is factory-equipped with a GSM module. A GSM modem with a SIM card and data package allows for free mobile work in the field.

WORK WITHOUT UNNECESSARY BREAKS - thanks to a replaceable battery, you can work even longer anywhere without mains power. NANO II can use two battery packs alternately. A discharged battery can be charged inside or outside the device via the power adapter.

FLEXIBLE COMMUNICATION - LAN, RS232 and USB communication interfaces are available as standard. Additional communication modules can be installed in the cash register, including WiFi, BT, 3G/LTE modem. Each NANO II cash register can work with a computer, barcode reader, payment terminal or scale without the need to purchase additional modules.

COMMUNICATION WITH CRK - Thanks to electronic transmission, receipts are systematically sent to CRK and the user does not have to worry about storing them. Access to the saved data is very simple - the user has constant access to the memory module protected by the application and can read it freely.

Parameters		
Number of products	20 000	
Number of PTU rates	7	
Online buffer capacity	20 000	
Number of cashiers	31	
Packages	64	
Product name	40 characters	
Euro currency support	yes (multi-currency)	
Printing mechanism:		
Type	thermal, clamshell type
