next online

Cash register

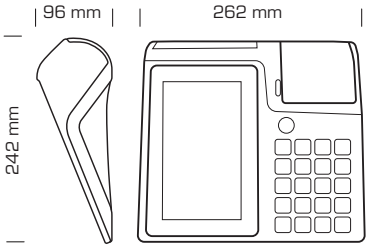

TRADITION AND MODERNITY IN ONE - There is a touch screen and a keyboard - use it as you prefer. The touch-sensitive screen makes every activity using the NEXT ONLINE cash register very easy. We have also not given up on the traditional physical keyboard. Thus, the user can freely change the method of operation. Intuitive and configurable software of the NEXT cash register allows for customising the appearance of the sales window in terms of functions and button colours. You can freely assign a function to each of the fields on the cash register's screen - it can be any cash register function or a quick sale item. It issues invoices and corrections, return documents, supports adding notes and customer IDs. Easy reporting, inventory, open bills and compatibility with the NoviCloud cloud system.

CASH REGISTER AND MORE - Configure any e-mail box, view correspondence, send invoices and maintain contacts with your clients. During a break, use the NEXT cash register like any other tablet, surf the Internet, watch Youtube and listen to music, use Android tools - clock, calculator, contacts, gallery and calendar. Additional sales applications, e.g. for restaurants, can also be installed on the device.

MULTI-COMMUNICATION - The NEXT cash register has all the necessary communication ports. The standard LAN port ensures seamless connectivity with the Internet and external sales systems. You can also use an external WiFi module or GSM modem connected to USB ports.

COMMUNICATION WITH CRK - Thanks to electronic transmission, receipts are systematically sent to CRK and the user does not have to worry about storing them. Access to the saved data is very simple - the user has constant access to the memory module protected by the application and can read it freely.

Online		
Communication with Centralne Repozytorium Kas	yes, LAN, WiFi, GSM 3G, GSM LTE	
Parameters		
Number of products	without limitation	
Number of PTU rates	7
