Cash register

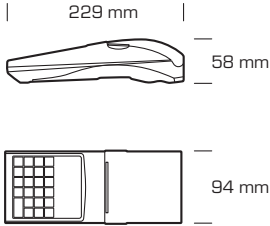

**NANO online** is a versatile cash register, dedicated to both stationary and field work, in services as well as medium and small retail outlets. Trust the brand used by over 900,000 businesses. This is the smallest cash register offered by NOVITUS, which at the same time handles communication with the Central Repository of Cash Registers (CRK), in accordance with the requirements of the Regulation of the Minister of Entrepreneurship and Technology of 28 May 2018 on the criteria and technical conditions that must be met by cash registers. Nano Online GSM cash register is factory-equipped with a GSM module. A GSM modem with a SIM card and data package allows for free mobile work in the field.

**MOST POPULAR** - This is the most sold cash register on the Polish market! Perfect for mobile sales as well as for a traditional sales stand. The small size of the device, waterproof, backlit keyboard and durable battery allow you to work freely for many hours. A replaceable battery will allow you to work even longer. Thanks to the cooperation with the NoviCloud cloud system, the cash register user has access to everything that is happening in their cash registers using a web browser or a dedicated mobile application.

**JAPANESE DURABILITY AND PRECISION** - The cash register is equipped with a reliable printing mechanism, proven in hundreds of thousands of fiscal devices. The clamshell mechanism makes the paper replacement quick and easy. The possibility of using 30 metres of paper allows you to print up to 300 receipts on one roll.

**UNIVERSAL COMMUNICATION** - LAN, RS232 and USB communication connectors as standard. Additional communication modules can be installed in the cash register, including WiFi, BT, GSM modem. The device works with a computer, barcode reader, payment terminal or scale without the need to purchase additional modules.

**COMMUNICATION WITH CRK** - Thanks to electronic transmission, receipts are systematically sent to CRK and the user does not have to worry about storing them. Access to the saved data is very simple - the user has constant access to the memory module protected by the application and can read it freely.
